

USING MEDIA AND ARTIFICIAL INTELLIGENCE IN TEACHING
ENGLISH

Nadirova Xilola Sirojonovna

Samarkand State Institute of Foreign Languages

Doctoral (PhD)

Annotation

This article explores the use of artificial intelligence (AI) in English language teaching (ELT). AI provides significant advantages, including personalized learning, intelligent tutoring systems, automated assessments, and immersive virtual reality environments. By leveraging AI, educators can offer more effective, individualized instruction and reduce administrative workloads. The integration of AI tools enhances student learning experiences and outcomes, making language acquisition more efficient. The article also highlights how AI supports both students and teachers, emphasizing its growing role in transforming the future of English language education.

Keywords: Artificial intelligence, Intelligent Tutoring Systems, Duolingo, Feedback, Virtual Reality.

Annotatsiya

Ushbu maqolada ingliz tilini o'qitishda sun'iy intellekt (SI)dan foydalanish masalasi yoritilgan. SI shaxsiylashtirilgan ta'lim, intellektual repetitorlik tizimlari, avtomatlashtirilgan baholash hamda immersiv virtual reallik muhirlari kabi muhim afzalliklarni taqdim etadi. SI imkoniyatlaridan foydalangan holda, o'qituvchilar yanada samarali va individual yondashuv asosida ta'lim berishlari hamda ma'muriy yuklamani kamaytirishlari mumkin. SI vositalarining integratsiyasi talabalarning o'rganish tajribasi va natijalarini yaxshilaydi, til o'zlashtirish jarayonini yanada samarali qiladi. Maqolada, shuningdek, SI talaba va

o'qituvchilarni qanday qo'llab-quvvatlashi ko'rsatilib, uning ingliz tilini o'qitish sohasining kelajagini o'zgartirishdagi tobora ortib borayotgan roli ta'kidlangan.

Kalit so'zlar: Sun'iy intellekt, intellektual o'qitish tizimlari, Duolingo, fikr-mulohaza, virtual reallik.

Аннотация

В данной статье рассматривается использование искусственного интеллекта (ИИ) в обучении английскому языку. ИИ предоставляет значительные преимущества, включая персонализированное обучение, интеллектуальные обучающие системы, автоматизированное оценивание и иммерсивные среды виртуальной реальности. Используя возможности ИИ, преподаватели могут обеспечивать более эффективное и индивидуализированное обучение, а также снижать административную нагрузку. Интеграция инструментов ИИ улучшает учебный опыт и результаты студентов, делая процесс освоения языка более эффективным. В статье также подчеркивается, как ИИ поддерживает как студентов, так и преподавателей, акцентируя внимание на его возрастающей роли в трансформации будущего обучения английскому языку.

Ключевые слова: Искусственный интеллект, интеллектуальные обучающие системы, Duolingo, обратная связь, виртуальная реальность.

Introduction

Artificial intelligence (AI) is transforming the landscape of education, particularly in language learning, where it offers innovative solutions for personalized instruction, assessment, and engagement. In recent years, the global market for AI in education has been rapidly expanding, projected to grow from **\$1.1 billion in 2019 to \$25.7 billion by 2030** (Market Research Future, 2021). Moreover, **85% of educators worldwide** believe that AI tools will significantly enhance language teaching methodologies in the next decade (Oxford Insights,

2020). As English continues to be the most widely learned language globally, integrating AI into English language teaching (ELT) offers enormous potential to improve learning outcomes and efficiency.

Main Part. Personalized Learning

One of the most significant advantages of AI in teaching English is the ability to offer personalized learning experiences. AI-driven platforms can adapt to individual students' learning styles, preferences, and progress. Tools like Duolingo and Memorize use machine learning algorithms to assess learners' strengths and weaknesses, providing tailored exercises and feedback that cater to their unique needs. This individualization accelerates the learning process, helping students to achieve fluency more efficiently than traditional classroom settings.

Intelligent Tutoring Systems

AI-powered Intelligent Tutoring Systems (ITS) are becoming increasingly popular in language education. These systems simulate a human tutor, offering personalized instruction, correcting mistakes, and providing instant feedback. Systems such as IBM's Watson Tutor can interpret a student's responses, evaluate their understanding, and adjust the complexity of tasks accordingly. In the context of English language teaching, ITS can provide more targeted grammar, vocabulary, and pronunciation practice.

Automated Assessment and Feedback

AI facilitates more efficient assessment of student performance, particularly in large-scale language learning environments. Automated writing evaluation tools, such as Grammarly or Turnitin, are widely used to check for grammatical errors, vocabulary usage, and overall writing quality. These tools not only save time for teachers but also provide students with real-time feedback that helps them improve their writing skills independently. Similarly, AI can assess spoken language proficiency using voice recognition and natural language processing, providing instant feedback on pronunciation and fluency.

AI-Powered Language Translation and Communication Tools

AI-based translation tools such as Google Translate and Microsoft Translator

allow students to easily translate texts and communicate across languages. These tools are particularly helpful in multilingual classrooms, where students might need quick translations to bridge the gap between their native language and English. While these tools are not perfect and sometimes lack nuanced understanding, they offer valuable support for beginner and intermediate learners.

Virtual Reality (VR) and AI in Language Immersion

AI, combined with virtual reality, enables immersive learning environments where students can practice English in real-world scenarios. For example, VR platforms like Mondly VR allow learners to engage in simulated conversations in various settings, from ordering food in a restaurant to navigating a foreign city. These immersive experiences provide contextual learning, which is critical for developing communication skills in a foreign language.

AI for Teacher Support

AI doesn't just benefit students; it also supports teachers by automating routine tasks and providing data-driven insights into student performance. For instance, AI can analyze classroom interactions to identify areas where students struggle the most, allowing teachers to adjust their teaching strategies accordingly. AI-driven analytics platforms can also help teachers monitor student engagement and progress, making it easier to provide targeted interventions when necessary.

Conclusion

The integration of AI into English language teaching is revolutionizing the way students learn and teachers instruct. Through personalized learning, intelligent tutoring systems, automated assessment, and immersive experiences, AI enhances language acquisition, making it more efficient and accessible. While AI cannot replace the human element of teaching, it offers powerful tools that supplement traditional methods, helping both students and teachers achieve better outcomes. As AI continues to evolve, its role in education will likely expand, offering new opportunities to improve English language teaching and learning on a global scale.
