*24.11 group 1st year Ranch University of technology philology and
Language Teaching English*

Abstract: *the use of Information Technology in teaching English is important today in making the educational process more efficient and interactive. Information technology, including the internet, mobile applications, multimedia tools and various platforms, offers new opportunities to teachers and students. In this article, we will reflect in detail on the advantages of Information Technology in teaching English, their application and its impact on the educational process.*

Key words: *Information Technology, English, traditional lessons, education, video lessons, platforms.*

Information technology allows you to make the teaching process more interactive. Traditional classes for students can often be tedious, but through multimedia tools such as video lessons, presentations, and interactive games, teachers can make classes fun and engaging. Students are actively involved in such classes, which increases their interest in the learning process. Information technology allows teachers to train students individually. Each student has a unique reading style and speed. With the help of information technology, teachers can choose and provide materials that suit the individual needs of students. For example, on online platforms, students can perform exercises that match their level of knowledge, developing their self-learning ability.[1]

Information technology helps teachers plan and organize classes. In the course of lesson planning, teachers can use a variety of resources. Many free and paid materials, textbooks and curricula available online allow teachers to make their classes more effective. Teachers can also use information technology to evaluate and analyze their classes, helping to continuously improve the teaching process. Information technology allows teachers to update their knowledge and skills. It is important for teachers to constantly learn new methods and approaches. Through the Internet, teachers will have the opportunity to exchange experiences with other professionals, take online courses and get acquainted with modern pedagogical approaches. This helps them to renew their knowledge and improve the quality of their training.[2]

Information technology plays an important role in the development of communicative skills of students. In the course of learning English, students often have to be able to interact with other students or English-speaking people. With the help of Information Technology, students can participate in online communication platforms, exchange ideas on forums and even connect with international readers. This helps to develop their language skills in a practical way. Information technology also facilitates assessment and control in the teaching process. Teachers can use online tests and assessment tools to quickly and efficiently assess students' level of knowledge. This helps teachers identify the strengths and weaknesses of students and allows for more efficient organization of the educational process.[3]

Information technology is important in developing students' self-learning skills. Students have access to a wide variety of resources, videos, articles, and textbooks via the internet. This helps them to independently expand their knowledge. And the ability to learn oneself is very important in modern society, because this skill is necessary for students to be successful in the future. Information technology expands the educational process at a global level. Students

will be able to connect with teachers and professionals from around the world via the internet. This helps to increase their cultural knowledge and to become familiar with educational systems in other countries. In the process of learning English, such global opportunities expand the worldview of students and shape them as more developed individuals.[4]

Conclusion:

As a result, the use of Information Technology in teaching English is important in making the educational process more efficient and interesting. They allow teachers to organize classes interactively and individually, while students have the opportunity to independently expand their knowledge and develop their communicative skills. At the same time, information technology facilitates the assessment and control of the educational process, allows teachers to update their knowledge and skills. All this will help make the process of learning English more effective and successful.
