**Abstract:** *English is today the foundation of global communication and plays an important role in many fields, including Business, Education, Science and culture. Learning English also helps to form the skills necessary for personal and professional development. Educational technologies, on the other hand, provide new approaches and opportunities for teaching English. This article will consider in detail the advantages of educational technologies in teaching English.*

**Keywords:** *English, education, teaching methodology, skills, materials, knowledge, Opportunity, science.*

One of the most important advantages of educational technology is that it makes the teaching process interactive and interesting. Traditional teaching methods often lead students to a passive state, which can reduce their motivation. However, with multimedia materials, video lessons, interactive games and simulations, students are actively involved in language acquisition. This allows them to apply their knowledge in practice and makes the teaching process more interesting. Students will have more opportunities to feel in the language environment they are learning, to master new words and phrases. Also, educational technologies provide personalized training. Each student has a unique learning style, speed and abilities. With the help of educational technologies, teachers can organize training taking into account the individual needs of students. For example, through online platforms, students can choose materials that match their abilities and read at their own pace. This helps to increase students' level of knowledge by studying in a style that is comfortable for them.[1]

Educational technologies for teachers facilitate the work process. Lesson planning, evaluation and monitoring of the learning process for teachers often take time. However, with the help of educational technologies, teachers can automate their work. For example, with the help of online assessment tools, teachers can quickly determine the level of knowledge of students and analyze the results. This allows teachers to take classes more efficiently, as they can focus more on students' needs instead of spending their time preparing classes. Educational technologies provide access to global educational resources. Through the Internet and digital platforms, students have access to a wide variety of resources, textbooks and teaching materials around the world. This further expands their learning of English. Students have the opportunity to communicate in English in an international environment, which further develops their language skills. They can expand their knowledge by getting to know different cultures. Educational technology also helps to increase the creativity of students. In the process of learning English, students must develop the skills of expressing their thoughts, communicating in writing and verbally. With the help of educational technologies, students will have the opportunity to create a variety of projects, presentations and creative works. This develops their creative thinking and increases their interest in learning the language. Through their creative work, students have the opportunity to express their thoughts and apply their knowledge in practice.[2]

Educational technologies help develop students' social skills. Through online platforms and social media, readers are able to interact, exchange ideas, and collaborate with other readers. This develops their teamwork skills and helps them feel free in the social environment. Students can further strengthen their knowledge by exchanging ideas with each other and become familiar with new ideas. Educational technologies make the teaching process more efficient and easier. The process of preparing and conducting classes for teachers is often difficult and time-consuming. However, with the help of educational technologies, teachers can automate their work. For example, with online lessons, video materials and interactive games, teachers will

have the opportunity to conduct classes more fun and efficiently. This increases students ' interest in the course and ensures their active participation.[3]

**Conclusion:**

In conclusion, there are many advantages of educational technologies in teaching English. They help to make the teaching process interactive and fun, provide personalized training, facilitate the work of teachers, provide access to global learning resources, increase creativity, develop social skills, improve efficiency and facilitate the teaching process. Therefore, the widespread use of educational technologies in teaching English is necessary. This has a positive effect not only on the development of language skills of students, but also on their overall development. Effective use of the capabilities of educational technologies for teachers and students will help to further develop the process of learning English in the future.
