Keywords: *Global Problems, Climate Change, Ecology, Poverty, Demography, Social Integrity, Technological Risks, International Organizations, Sustainable Development.*

Global Problems - Curriculations of Universal Life and Development. These include the prevention of the global thermonuclear war, the fight against international terrorism and peace for all nations; prevent the disposal of the population of developed and developing countries, to prevent the rapid growth of hunger, poverty and illiteracy, to prevent destructive environmentally pollution; The desired resources of humanity - providing food, industrial raw materials, energy sources, development of science and technology to negative consequences. The global issues were originally caused by the most universal significance of the economic, socio-political, military, scientific-technology, socio-cultural processes in the world.

From natural resources, we use the energy source for daily activities. They are divided into reset and non-renewable sources. The difference between these two types of resources is that renewable resources can completely complete itself, and non-renewable resources do not have such characteristics. This means that non-renewable resources cannot be limited and can be used sustainable. There are four main types of non-renewable sources: oil, natural gas, coal and nuclear energy. The decline is

declining. This is a big problem for humanity, as non-renewable sources make up 85% of energy consumption worldwide, and we need 85% of our energy now. Over the past 70 years, the GLICness consumption has doubled due to developing countries and innovations in the technology. Over the next 30 years, it is projected to be three-folding.

Global problems can be divided into 4 groups:

- Global issues emerging in international political relations;
- Global issues arising in international economic relations;
- Global problems in the social sphere;
- Global problems that emerge as a result of the relationship between human and nature.

Edit global problems in international political relations. These problems are the existence of developed, developing, developing countries. Today, in determining the world's political order, the position of 7 developed countries in the world is great. The gap between the backs of backwards with these countries is very intense. While democratic values have developed in developed countries, democratic values have been developed in backward countries, violated social relations, which contradicts democracy, have arisen anti-international security. This is confirmed by terrorism, visions of extremism.

The global mining system in international economic relations, in which the advantages of countries developed economies were determined. The economies are overly developed, while converted corporations are ruling by the World Eciance, dependent on the other side, dependent on them, the economies are very ranked countries. Despite the achievements of economic and scientific-technical development in the world, the difference between the rich and poor countries is growing. At the end of the twentieth century, developed countries produced 86% of the World Gross National Product, while poor countries produced only 1%.

Some countries have borrowed a very large amount of developed countries. As a result, they are politically independent countries, dependent on economically developed countries. There are also negative consequences of globalization in global

economic relations. For example, he squeezes the national market, intensifies unemployment, the fraction of farmers. This has committed an anti-globalization movement - protests took place in several European cities. Global economic processes have created the active financial and economic criminal groups in the world.

Conclusion:

Global Problems are one of the most pressing issues of human problems today. Problems such as climate change, environmental problems, poverty, social inequality and technological risks threaten the sustainable development of humanity. It is important to develop international cooperation, innovative technologies and sustainable development strategies to address these issues.

These problems can deepen, if the states, international organizations and the public does not work together. Therefore, the main directions of creating a stable and safe worldly generation of the environment, provide economic justice and wisdom of technology.
