

## “THE ROLE OF ARTIFICIAL INTELLECT IN THE FIELD OF INTELLECTUAL PROPERTY RIGHTS”

The student of special faculty of  
*PUBLIC SAFETY UNIVERSITY*  
of Republic of Uzbekistan,

*Tulkinova Sevinch*

### ANNOTATSIYA:

Ushbu maqolada intellektual mulk yaratish hamda ulardan foydalanish bilan bog‘liq holda yuzaga keladigan munosabatlarni tartibga solishning ahamiyati, xususan, bu sohada sun‘iy intellektning o‘rni, u tufayli yuzaga keladigan ayrim huquqiy muammolar va ularning yechimlari tahlil qilinadi.

**Kalit so‘zlar:** intellektual mulk huquqi, sun‘iy intellekt, mualliflik huquqi, ixtiroga bo‘lgan huquq, muallif, huquq egasi

### ABSTRACT:

This article analyzes the significance of the regulation of a relationship that occurs in connection with creating intellectual property and its use. In particular, the place of Artificial intelligence in this field as well as some legal problems arising due to AI and their solutions will be discussed.

**Keywords:** intellectual property rights, artificial intelligence, invention, ownership, authorship, rights.

### АННОТАЦИЯ:

В этой статье анализируется важность регулирования отношений, которые возникают в этой статье, в частности, место искусственного интеллекта в этой области, некоторые юридические проблемы и их решения анализируются.

**Ключевые слова:** права интеллектуальной собственности, искусственный интеллект, авторское право, право на изобретение, автор, правообладатель

Intelligent property includes products of creative mental activity, and the terms of creative work, discoveries, inventions, terms, terms, rational symptoms, complex terms, database, trademarks, terms and other mental property objects.[1]

The concept of "intellectual property" is a generalizing in relation to the whole a number of legal institutions, of which the most significant are the institution of commercial

Secrets, patent law, copyright and trademarks. Commercial secret legislation

And patent law contributes to the research and development of new ideas.

Copyright

contributes to the creation of literary, artistic and musical works, as well as'

Computer software. Legislation on trademarks "links"

The product with its manufacturer. In recent years, a number of new forms of intellectual

property. And each of the institutions of intellectual property rights associated with them

It has its own development history and its specific tasks.

Commercial secret in the form of production secrets existed with timeless times. The ancient masters undoubtedly guarded the techniques with which they turned

Stones in the guns. These masters long before the emergence of any legal protection

They knew what advantage they received from the knowledge of these secrets. However, the possession of secrets in

entities, gives only limited protection. Only millennia later the right arose,

Protective secrets of production. The protection of secrets developed into the branch of unprecedented significance, and

Technical knowledge and commercial secret have turned into the most significant values of many

business industries. The protection of commercial secrets is one of the most important institutions .

Intellectual property rights precisely for those countries that strive to attract

Foreign investments. One individual company protecting its production

Secrets, can still decide to sell products it manufactured in a country with weak protection

commercial secrets, but it is unlikely that such a country can count on serious direct

investments.

Patent law has began to develop relatively recently.

It is an important tasks of the state to eliminate violations and its consequences and prevent its consequences in the field of intellectual property and the prevention of possible offenses.

Because the intellectual property rights are part of one side, on the other hand, the integral part of human rights is an integral part of human rights. Not only material objects, but also intellectual property, accordingly, acknowledged that the Kant recognizes his right to creativity, according to the Russian scientist Ryolliyakov [2].

The struggle against the Intellectual Property Cruelty is one of the most important manifestations of guaranteeing economic, personal and moral rights. The high level of intellectual property is one of the important guarantees of increasing the country's economic development and investment attractiveness.

Accordingly, the country's innovative development cannot be ensured without creating an effective legal protection and protection system in copyright or inventive industry. At the same time, this sector has become a larger profitable profile industry to the economies of developed foreign countries.

In 1967, the Convention was adopted on the establishment of the World Intellectual Property Organization (WIPO).

Since 2000, April 26 is celebrated as "International Intellectual Property Day."

On April 22-23, 1996, with the participation of the international community, a international conference was held in Paris, UNESCO, April 23, "International book and copyright Day."

In Uzbekistan, 2022-2026 was adopted "Strategies for the development of intellectuallux development in the Republic of Uzbekistan".

The Resolution "On additional measures for further development of intellectual property on April 26 was adopted" Resolution No. 221.

The Republic of Uzbekistan became a member of the World Intellectual Property Organization in December 1991, and the Intellectual Property Agency was established.

Since 1993, the protection of industrial property has joined the Paris Convention.

We can say that patent law serves as a certain recognition of the imperfection of the system of a market economy, because

a market economy, well adapted to ensure production and distribution

goods are unprofitable in order to encourage the creation of new and best goods.

It is due to the fact that when inventing a new product in a purely market system competitors

immediately copy it and reduces its price to the cost of production costs, thereby

reducing profit to a level at which it is impossible to reimburse research on research and

Developments that led to the emergence of an invention. Patent law just arose for resolving this problem. Ensuring the protection of the invention from competitors for many years

forward, the patent increases the chances of making a profit and, thereby, stimulates

invention.[3] A patent is a costly mechanism of legal protection in the sense that society has to pay a higher price for a patented product due to reducing the competition of manufacturers in this area.

In the same way as the institution of patenting contributes to the development and research.

New, copyright promotes the creation of literary works. On writing

Books can take years. In the market system in its pure form, if the book is successfully sold,

Other publishers will immediately publish the same book. Such competition will lead to a decrease

prices, which, accordingly, gives rise to the reluctance of authors and publishers to spend a lot of time

And the money required for writing and edition of the book. Ensuring the protection of the author's rights and

The publisher, copyright creates an economic incentive to create new works.

Intellectual property experts must protect the rights of their customers and help them avoid violations. But unlike legal advisers on other issues, specialists in

Intellectual property is responsible for the protection of rights on a different scale.

So, lawyers practicing in the field of real estate should usually know legislation governing property legal relations within one specific

jurisdictions, namely within the location of real estate and the competence of the lawyer himself.

There is no likelihood that any other legislation, except French, will be regulate land ownership and buildings in Paris.

Although in Uzbekistan, as well in all spheres, the issues related to the protection of copyright, literature, reorganization and inventive and inventive development is reached at the level of the issue.

Anton Ivanov emphasizes that it is easier to solve the problem as a separate species of artificial intelligence as a subject of civil law, it is enough to recognize it as a separate species. The property rights of this property in detail and does not limit the liability of both the owner or the robot owner in any case. [4] Semyon Somenov is also added to A.Iganov, but "smart" is "early" to raise the issue of recognizing robots as a person. [5]

The spread of artificial intellectual systems in production and daily life is growing. Intellectual computer applications are purchased by consumers, industrial robots are integrated into the manufacturing environment, so artificial intelligence systems are civil and act as an object of civil law. The complex, how complex the artificial intelligence system is, the more the questions about his condition are so much stop. For example, some of these systems can create new objects, improving small objects, improving the smaller intentions of the designer and previously existed. Accordingly, the following questions are available in the issues of issues to be discussed in the regulation of civil law:

- Sunner is not object of civil law, but potential possible status;
- distribution of liability for damage caused by the unaffected Intellect;
- Intellectual property rights and others to the works created in the presence of the evening.

Artificial intelligence is currently not recognized as a subject of law, although its legal entity was discussed for a while researchers and politicians.

The ability of artificial intelligence has developed the autonomous works has brought a new era of self-organizing the author's concept. The clash of human discovery and the carpet of innovations will miss the person to make a person a little monthlight about the attribute of the content created by artificial intelligence. After the transformation of artificial intelligence, we need to maintain the development of technology and to maintain a stability. As the resources of artificial intelligence continues to move, in the dynamic landscape, the dynamic landscape requires a joint effort to develop the future in the dynamics of creativity, innovation and protection.

To conclude, The current state of artificial intellect is problematic because of the influence of intellectual property rights

is calculated but made by artificial intellect

Recognizing the objects of intellectual property rights is a step in the future. However, it is done

Improving is a real problem. This is offered to improve this.

First, the recognition of artificial intelligence should be achieved, including some

Legislation of countries such as the countries, British and New Zealand

Even legal basis is in the system. Second, artificial intelligence today

He is doing a man similar to each field. In the future, they perform better tasks and accept their decisions themselves.

It will not be funny. Organize artificial intelligence to keep track of the same thing

Protection of the current system, i.e. artificial intellect information

The law must be developed. This law is this technology Criminal and civil defamers committed by humanity. Liability may be specified. Third, intellectual property right created by artificial intellect .

Copyright rights to objects should be given to the person who created it. In this case, private dental rights remain artificial intelligence themselves, but property rights by its creator or other persons on the basis of the contract can be used.
