

INFLUENCE OF TKT CERTIFICATE DURING TEACHING ENGLISH IN MEDICAL INSTITUTE

Akhmedova Aziza Furkatovna

Tashkent State Medical University

Abstract: *Teaching English in medical institutes is one of the relevant and important areas today. In modern medicine, English is one of the main tools in international scientific relations, the study and qualification of modern literature. Effective teaching of English in medical education ensures students' professional capacity building, world recognition and transformation into mature individuals in every way. In this regard, it is very important for English teachers to have modern approaches, pedagogical skills, and methodological processes. The TKT (Teaching Knowledge Test) certificate, on the other hand, is an important document at the international level, confirming the improvement of the qualifications of English teachers, the assessment of their professional level and the mastery of knowledge in accordance with the requirements of the Times.*

Keywords: *medical institutes, skills, methods, modern approaches, technologies, language, methodological knowledge, assessment.*

The TKT certificate allows you to use innovative methods in the process of teaching English, to form language competence in students, to implement modern approaches to the educational process. Through the TKT program, teachers gain in-depth knowledge and skills in terms of Modern Language Teaching Methodology, lesson plans, methods of developing language skills, assessment processes, and working with student motivation. This is of particular importance in raising the standard of teaching English in medical institutes and improving the quality of Education. In teaching English, TKT certified teachers organize classes based on interactive methods. In doing so, they have clear methodological knowledge on the structure of the course process taught in the TKT program, setting pedagogical goals based on the needs of students, effective lesson management and the correct

interpretation of language categories. The lessons conducted in this way form not only knowledge, but also the skills of independent thinking, analysis, questioning, firm expression of one's own opinion, clear and holistic expression in oral and written form in the student.[1]

The TKT certificate serves not only for the professional growth of the teacher, but also to enrich the content of the educational process. Such teachers effectively use interactive, modern, communicative techniques in the course of the lesson. Communication with students, taking into account their personal and professional needs, a correct and fair assessment of student knowledge, TKT certificate approaches are of great help in creating a motivational environment for both parties. In teaching medical English, the TKT certificate prepares students to actively participate in such important stages as being able to use scientific and professional resources, independent study of modern medical literatures and international scientific conferences, round tables, training abroad. Educators who have mastered the TKT program know how to organize the lesson with a specific goal, approach it taking into account the individual capabilities and language level of each student, apply motivational techniques that create the need for a deep and consistent study of the field. Another important aspect is that TKT certified teachers are putting global experiences into practice in teaching foreign languages. They will have pedagogical technologies, modern information and communication tools, skills for integrating innovative ideas in science and education into the course process. All this increases the effectiveness of studying English at the Medical Institute, as a result of which it is possible to master new modern technologies and innovations in the field of Medicine at a short opportunity.[2]

The preparation of teaching English teachers in accordance with modern certificates, in particular, TKT standards, leads to a radical increase in the qualifications of personnel in the field of Medicine, achieving high results by introducing international experience in medical education. As teachers regularly improve their skills, they constantly take a step forward in the development of knowledge, assessment, communicative competence in educational processes, the

widespread use of modern educational materials, multimedia tools, the improvement of the quality of Education. Teachers with TKT certification form a positive attitude towards language, independent learning and use skills in students, developing open mind and global thinking in them. Through this, students grow up to be mature professionals who can effectively take advantage of the opportunities for modern scientific research, international cooperation, professional development, study and work in foreign educational institutions. Internationally, Medical English significantly facilitates learning, making them more accessible from the most advanced educational and innovative innovations.[3]

Now the share of the TKT certificate is large even in raising the level of quality in teaching English, introducing international standards in education and strengthening the general methodological level. Teaching on the basis of TKT provides advanced pedagogical approaches and gives impetus to the excellent mastery of systematic knowledge acquisition, assessment, lesson transition stages. A teacher who has passed the TKT program will constantly update himself, effectively use interactive methods, be ready to communicate with students, and be able to provide an individual approach to each student. This is one of the important factors in improving the quality of medical education and meeting the demand for modern personnel. In terms of language teaching, the skills taught in TKT courses have a positive effect on each stage of the course process. These teachers, abandoning the traditional approach, begin to work creatively and analytically, actively introduce methods that help to achieve success in exams and practical conversations, including modern types of grammatical and lexical tasks, educational materials compiled on the basis of recent achievements. TKT knowledge teaches the teacher to interpret language elements deeply and correctly, motivate students during classes, identify problems and find independent solutions. The importance of the TKT certificate is also that the teacher working with this certificate will be able to prepare students for exams such as international IELTS, TOEFL, as well as to teach academic and professional English in good quality. Through the use of modern methodologies in classes, students quickly and efficiently master the

literature of the field, professional foreign knowledge is harmonized with modern conditions. In turn, this serves to ensure that graduates who have graduated from a medical institute have professional knowledge and skills in accordance with international standards. Today, in order to actively implement advanced methodologies in teaching English in medical institutes, to introduce new pedagogical approaches into practice, to achieve good results in classes based on communicative skills, modern teaching technologies and an assessment system, modern educational approach is very important. The TKT certificate is one of the most important tools that serve to ensure exactly such results, harmonize knowledge with practice, adapt it to modern international educational standards. As teachers work hard on themselves, acquire knowledge and skills at the TKT level, changes, innovations, effective results also appear in the educational process. The increase in the level of teaching a foreign language based on modern standards in medical institutes serves to successfully compete in the development of Science and in the international arena. This determines the enormous importance of the TKT certificate and modern methodological approaches taught on its basis in solving the pressing problems of modern medicine, quickly and qualitatively mastering innovations, working together in international communities, using foreign sources, in short, in the cultivation of mature individuals in all respects. A large-scale qualitative and modern approach is destined to cause a significant rise in the results of modern technologies, pedagogical methods and training in medical institutes. Teachers with TKT certification conduct a lesson with experience, relying on modern requirements and methodologies. This in turn ensures that medical education reaches a new high level, the implementation of modern pedagogical standards in practice, increases the effectiveness of learning foreign languages.[4]

Conclusion:

In conclusion, the importance of the TKT certificate for medical institutes in teaching English is invaluable. This certificate makes it possible to actively introduce modern pedagogical methods into the educational process, ensure that the professional and methodological potential of teachers is high, deepen student

knowledge, implement international requirements in medical education and, as a result, train mature specialists. Teaching English at a high level and in a modern style in medical institutes can be carried out precisely through such an advanced approach and the widespread introduction of certificates into practice. With the help of TKT certified teachers, the quality of education is improved, and students become professionals who are able to fully meet the requirements of the Times, compete in their field, successfully operate in the international arena.
