

"THE ESSENCE OF THE CONCEPT OF SPIRITUAL EDUCATION AND FORMATION OF SKILLS OF YOUNG PEOPLE" IS HOW URGENT THE ISSUE OF EDUCATION IS IN TODAY'S RAPIDLY DEVELOPING ERA.

Karshiboyev Javlonbek Rustam ugli

English teacher at Tashkent District Polytechnic No. 1.

***Annotation.** The peaceful life of the society is determined by the richness of the spiritual outlook of its members. This is evidenced by the history of civilizations that have reached many milestones in the history of mankind. Such characteristics are definitely formed in members of society through education. "Education is a practical pedagogical process aimed at forming certain physical, mental, moral and spiritual qualities in a person."*

***Key words.** Spiritual, concept, society, humanity, education, family, school, factor, people, children, formation.*

Ensuring that a person has the characteristics necessary for living in society is the most ancient and eternal value that ensures the humanity of a person. Without education, an individual cannot exist for a human society. Because the values that ensure the existence of a person and society are gradually transferred from ancestors to generations only because of education. In a broad sense, education means the sum of all influences, activities, actions, and aspirations aimed at forming a human personality, ensuring his active participation in the production of society and social, cultural, spiritual and educational life. In this understanding, education includes not only the educational work carried out in the family, school, children and youth organizations, but also the entire social system, its leading ideas, literature, art, cinema, mass media, etc. Also, the concept of education in a broad sense includes education and information exchange.

Education has been interpreted differently in different periods of society's

development. During the time of the Soviet Union, the ruling communist ideology demanded to approach education as a class and party phenomenon, in this process genetic and biological characteristics were almost not taken into account. After the independence of Uzbekistan, the approach to education and the processes related to it, based on a new and healthy thinking, began to be decided. Unscientific class-party approach is abandoned in its interpretation. Particular attention was paid to his nationality and ethnic background. Education is a product of consciousness, but at the same time, it is the most important factor that determines the level of consciousness and its development, that is, it forms and enriches the spirituality of the people. Therefore, it is impossible to develop spirituality without changing the education system and, on this basis, consciousness. For this reason, it is impossible to separate education from education, and education from education - it is an oriental view, an oriental philosophy of life. The force that causes the society to move continuously is the national idea, the values that serve the national interest, the advanced democratic rules and concepts, to clearly imagine them, to study them, to preserve them, to form and enrich them, development, education of the people, first of all, the young generation, with this knowledge and skills is the most important task in the field of spirituality. In order to ensure the integrity of the processes of fulfilling this important task, the "Concept of Continuous Spiritual Education" was adopted. This is the purpose of the tasks set within the framework of five important initiatives and the work carried out based on them. Today's era demands high intellectual potential from young people. After all, as President Sh. Mirziyoyev said, "Innovation means the future." If we start building our great future today, we should start it on the basis of innovative ideas and an innovative approach." The changes, reforms and updates occurring in various aspects of the social spheres of our modern society are primarily aimed at accelerating social development. The basis of the occurrence of these social realities and events is the problem of the formation of features of social activity among the population, especially among the youth, who make up 60% of our society. Social activity is characterized by the factors of personal maturity, such as the formation of a strong

will of a person, self-awareness and evaluation. Taking into account that young people are the owners of the future and that educating them in the spirit of confidence in the future is of great importance for development, it is necessary to create a special cultural model for the rational use of mass media. As President Sh.Mirziyoyev noted, "In modern conditions, the wide use of the achievements of world science and innovation activity is becoming an important factor in the consistent and stable development of all spheres of society and state life, and in building a worthy future of the country.

Every family, parent, first of all, should see a person in the form of a child, and always feel that he is responsible for ensuring all the rights and freedoms of a person. In conclusion, it can be said that a person who has received a good spiritual upbringing lives as a free and free-thinking person, aware of his own mind, his own thinking, his own work, his own responsibility. Such people cannot destroy the organized society, the spiritual and spiritual atmosphere they have created, false beliefs, shouts, air slogans, and spiritual attacks. They cannot be distracted from their life goals, which they have chosen with their intelligence and heart. People who are selfless and loyal to the country, the fatherland, true patriots, who have deep knowledge and great life experience, political scientists, philosophers, pedagogues, psychologists, historians, scientists, creators intellectuals, media workers are relied upon. "Strategy of New Uzbekistan" put forward by the President of the Republic of Uzbekistan Sh.M. Mirziyoyev - implementation of the idea of "New Uzbekistan", "Foundation of the Third Renaissance" in our country, renewal and modernization of the country and the national idea indicates that it is a development factor.
